h_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Mon Mar 13 10:22:03 2000; MasPar time 8.65 Seconds 398.104 Million cell updates/sec

Tabular output not generated.

Description: Perfect Score: Title: >US-09-147-947-6 (40-112) from US09147947A.pep (2 of 6) 611

Scoring table: PAM 150 Gap 11 .

Sequence: 1 CPAGEPWVSVTDFGAPCLRW......RPWCFYGDARGKVDWGYCDC 73

Searched:

142080 seqs, 47172406 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: pir62

1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 36.459; Variance 65.448; scale 0.557

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

t-PA converts plasminogen to plasmin by hydrolyzing a single Arg-Val bond. It is active in tissue remodeling and destruction, particularly in fibrinolysis, and in cell migration.

t-PA binds chain A of fibrin by kringle 2 and the fibronectin type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of.

Plasmin is inactivated by alpha-2-antiplasmin (see PIR:847217) immediately after dissociation from the clot. In the presence of the inhibitor, the activation involves only cleavage after Arg-581, resulting in two chains connected by two disulfide bonds. Without the inhibitor, the activation involves also removal of the activation peptide.

Stromelysin 1 (see PIR:KCMSS1) acts on plasminogen to produce angiostatin. Together with endostatin (see PIR:A56101, angiostatin acts to inhibit angiogenesis, and so may be useful in treating solid tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Plasminogen is synthesized by the kidney and is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     dissolves the fibrin of blood clots; acts as a proteolytic factor in a variety of processes including embryonic development, tissue remodeling and tumor invasion; in ovulation it weakens the walls of the graafian follicle;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S48203
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Lijnen, H.R.; van Hoef, B.; Beelen, V.; Collen, D. ₫ď protein - protein database search, using Smith-Waterman algorithm

Tabular output not generated. Run on: Mon Mar 13 10:21:05 2000; MasPar time 5.46 Seconds 399.446 Million cell updates/sec

Description: Perfect Score:

Title: >US-09-147-947-6 (40-112) from US09147947A.pep (2 of 6) 611

Sequence: 1 CPAGEPWVSVTDFGAPCLRW.....RPWCFYGDARGKVDWGYCDC 73

Scoring table: PAM 150 Gap 11

Searched:

82229 segs, 29864866 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot38

Statistics: Mean 37.173; Variance 60.386; scale 0.616

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

12 Blochemistry 23:4243-4250(1984).

23 -1 FUNCTION: PLASMIN DISSOLVES THE FIBRIN OF BLOOD CLOTS AND ACTS AS PROTECURIC FACTOR IN A VARIETY OF OTHER PROCESSES INCLIDING EMBRYONIC DEVELOPMENT, TISSUE REMOBELING, TUMOR INVASION, AND INFLAMMATION; IN OVULATION IT WEAKENS THE WALLS OF THE GRAAFIAN FOLLICLE. IT ACTIVATES THE UROKINASE-TYPE PLASMINGEN ACTIVATOR, COLLAGENASES AND SEVERAL COMPLEMENT ZYMOGENS, SUCH ACTIVATOR, COLLAGENASES AND SEVERAL COMPLEMENT ZYMOGENS, SUCH AS C1 AND CS. IT CLEAVES FIBRIN, FIBRONECTIN, THROMBOSPONDIN, CLAMININ AND VON WILLEBRAND FACTOR.

24 C -!- ENZYME REGULATION: CONVERTED INTO PLASMIN BY PLASMINOGEN ACTIVATORS, BOTH PLASMINOGEN AND ITS ACTIVATOR BEING BOUND TO FIBRIN. CRANNOT BE ACTIVATED WITH STREDTOKINASE.

25 -!- MISCELLANEOUS: PLASMIN IS INACTIVATED BY ALPHA-2-ANTIPLASMIN IS INMEDIATELY AFTER DISSOCIATION FROM THE CLOT.

26 -!- SIMILARITY: BELONGS TO THE PLASMINOGEN SUBFAMILY.

27 - SIMILARITY: BELONGS TO THE PLASMINOGEN SUBFAMILY.

                                                                                    FUNCTION: PLASMIN DISSOLVES THE FIBRIN OF BLOOD CLOTS AND ACTS A PROTEDUTIC FACTOR IN A VERIFITY OF OTHER PROCESSES INCLUDING EMERYONG DEVELOPMENT, TISSUE REMODELING, TUMOR INVASION, AND INFLAMMATION; IN OVULATION IT WEAKENS THE WALLS OF THE GRAFIAN FOLLICLE. IT ACTIVATES THE UROKINASE-TYPE PLASMINOGEN ACTIVATOR, COLLAGENASES AND SEVERAL COMPLEMENT ZYMOGENS, SUCH AS C1 AND C5. IT CLEAVES FIBRIN, FIBRONECTIN, THROMBOSPONDIN, AS C1 AND YOU WILLEBRAND FACTOR.
ACTIVATORS, BOTH PLASMINOGEN AND ITS ACTIVATOR BEING BOUND T
FIBRIN. CANNOT BE ACTIVATED WITH STREPTOKINASE.
MISCELLANEOUS: PLASMIN IS INACTIVATED BY ALPHA-2-ANTIPLASMIN
IMMEDIATELY AFTER DISSOCIATION FROM THE CLOT.
                                        FUNCTION: ANGIOSTATIN IS AN ANGIOGENESIS INHIBITOR THAT BLOCKS NEOVASCULARIZATION AND GROWTH OF EXPERIMENTAL PRIMARY AND METASTATIC TUMORS IN VIVO.

ENZYME REGULATION: CONVERTED INTO PLASMIN BY PLASMINOGEN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WGYC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "Primary structure of guinea-pig Hageman factor: sequence around the cleavage site differs from the human molecule.";

RL Biochim. Biophys. Acta 1159:113-121(1992).

CC -!- FUNCTION: FACTOR XII IS A SERUM GLYCOPROTEIN THAT PARTICIPATES IN CENTRATION OF BRADYKININ AND ANGIOTENSIN.

CC -!- CATALYTIC ACTIVITY: CLEAVES SELECTIVELY ARG-|-ILE BONDS AND ACTIVATES COAGULATION FACTORS VII AND XI.

CC -!- CATALYTIC COUNTY: CLEAVES SELECTIVELY ARG-|-ILE BONDS AND ACTIVATES COAGULATION FACTORS VII AND XI.

COMPLEX BOUND TO AN ANIONIC SUFFACE. PREKALLIKREIN IS CLEAVED BY FACTOR XII TO FORM KALLIKREIN, WHICH THEN CLEAVES FACTOR XII FIRST TO ALPHA-FACTOR XIIA AND THEN TO BETA-FACTOR XIIA ALPHA-FACTOR XIIA ACTIVATES FACTOR XIIA AND THEN TO BETA-FACTOR XIIA. ALPHA-FACTOR XIIA.

-! CATALYTIC ACTIVITY: CLEAVES SELECTIVELY ARG-|-ILE BONDS AND ACTIVATES COAGULATION FACTORS VII AND XI.
-! PTM: O- AND N-GLYCOSYLATED (BY SIMILARITY).

-! MISCELANBEOUS: FACTOR XII, PRERALLIKREIN, AND HAW KININOGEN FORM A COMPLEX BOUND TO AN ANIONIC SURFACE. PREKALLIKREIN IS CLEAVED BY FACTOR XII TO FORM KALLIKREIN, WHICH THEN CLEAVES FACTOR XII FIRST TO ALPHA-FACTOR XIIA AND THEN TO BETA-FACTOR XIIA ALPHA-FACTOR XII TO FACTOR XII A SETA-FACTOR XIIA ACTIVATES FACTOR XI TO FACTOR XIIA AND THEN TO BETA-FACTOR XII SIALPHA-FACTOR XII AS IT LACKS THE TRYPSIN/ KALLIKREIN CLEAVEGE SITE.

- SIMILARITY: CONTAINS 1 FIBRONECTIN TYPE-II DOMAIN.
- SIMILARITY: CONTAINS 1 FIBRONECTIN TYPE-II DOMAIN.
- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1; ALSO KNOWN AS THE TRYPSIN FAMILY:

- TRYPSIN FAMILY.
